Date _____

Account Number _____

Pet's Name _____

() Canine () Feline () Other

Owner's Name _____

Address _____

Phone number(s) where you can be reached throughout the day: _____

I authorize and direct Dr. _____, my veterinarian, to perform the following operation upon the patient named above and/or to do any other therapeutic procedure that his or her judgment may dictate to be advisable for the patient's well being: The risks and nature of the procedures as well as alternatives have been explained to me, and no warranty or guarantee has been made as to the result or cure. The doctor has answered all my questions and I hereby consent to the procedure. **NOTE:** Tooth extractions may be deemed necessary during a dental cleaning.

Surgical Procedure _____

We strongly recommend a **pre surgical blood screen** on all patients undergoing anesthesia. The blood screen includes kidney and liver functions, dehydration and blood sugar testing, as well as checking for anemia and clotting time. The cost for this is \$58.80.

- Yes, I want the above tests performed on my pet.
- No, I do not want the above tests performed on my pet.

I.V. catheter placement allows easy administration of anesthetic or emergency medication into the vein. **Fluids** insure hydration and stabilization of blood pressure as well as removing anesthetic from the blood during the recovery period. **These procedures are required for all surgeries for the overall wellbeing of your pet.**

Laser use in surgical procedures is available and provides the best possible outcome for your pet. The advantages are reduced blood loss, little or no swelling, and less post-operative pain. Laser allows more precision when removing tissue and pets require fewer or no sutures.

- Yes, I would like to add the Laser procedure to my pet's surgery at an additional charge of \$ _____
- No, I do not wish to add the laser procedure to my pet's surgery

We also offer **microchipping** for dogs and cats which allows easy identification of lost pets. This is ideally done while the pet is already under anesthesia (cost is \$41.00 per pet.)

- Yes, I wish to have microchip implanting done on my pet.
- No, I do not wish to have microchip implanting done on my pet.

Please Note: Spay costs increase if patient is in heat, obese, pregnant or over two years of age.
